

Manual

1, Connect the data cable, turn on the clock.

Open your phone -> Setting -> WLAN.

Connect to this: Smart Weather Clock.

The matching web page will open automatically.

2, Click the drop-down list under WiFi Settings, select your WiFi name, enter the password, and click Connect.

3, after the clock automatically restarts, open your cellphone browser, enter the IP address rotated in the upper left corner of the clock, such as: 192.168.**. **.

4, Set the city, brightness, temperature unit and other functions.

5, Enjoy!
